

Class & Function Template

```
1  class Example {
2      static <type> <classProperty1> = <defaultValue1>;
3      static <type> <classProperty2> = <defaultValue2>;
4
5      public static void main(String[] args) {
6          //Calling a non-void function
7          <type> <variableName> = <function1Name>();
8
9          //Calling a void function
10         <function2Name>()
11     }
12
13     public static <type> <function1Name>(<param1Type> <param1Alias>, <param2Type> <param2Alias>) {
14         /*
15         |  function definition
16         */
17
18         return <functionResult>
19     }
20
21     public static void <function2Name>(<param1Type> <param1Alias>) {
22         /*
23         |  function definition
24         */
25
26         // NO RETURN STATEMENT
27     }
28 }
```
